Recd. Dt. Tim.	05/11/2019 15:06:11			Ref. By	DR. SAMEER DAKSHI
Age	4 Yrs	Sex	Male	Report Dt. Tim.	14/11/2019 16:16:02
Name	Mr. ANURAG KUMAR 237465				

Chromosomal Analysis: GTG Banding

Method Used : 24/48 Hr Unstimulated culture
 Specimen type : Heparinized Bone Marrow
 Specimen Adequacy : Adequate
 Clinical Indication : ?

Banding Resolution : 300-550 bpha

Cytogenetic Profile

Metaphases Counted : 20
 Metaphases Analyzed : 20
 Metaphases Karyotype : 10

Karyotype

Total Chromosome Number : 46
 Autosomes : 44
 Sex Chromosomes : 2 (XY)

Observation : 46,XY,t(9;22)(q34;q11.2)[17]/46,XY[3]

Interpretation

There is a balanced reciprocal translocation between the long arms of one of the chromosomes 9 and 22, between the regions q34 and q11.2 respectively found in 85% of the metaphases studied, suggestive of Philadelphia positive chromosome complement

The remaining 15% of the metaphases show normal chromosome complement

Limitation: Low grade clonal rearrangements and/or the presence of submicroscopic or cryptic abnormalities may not be evident on conventional karyotyping

Correlation of chromosomal study with clinical, hematological & molecular findings is recommended

The study was performed at a facility outside Oncoquest Laboratories (I)

Contd. 2

The sample is processed by Oncoquest Laboratories Ltd.
